The Challenge

- » Securing all kinds of sensitive business information
- » Complete protection and comprehensive reporting for all USB activities
- » Optimum solution that can help even 1 administrator manage the entire network

The Customer

With headquarters in Kolkata, India, Asbesco India Private Limited has been delivering high class technology in power transmission line hardware since its inception.

'Asbesco' was founded by Prem Ratan Bagree in 1965 and was subsequently incorporated as a private limited on 13th October 1980, with a registered head office in Calcutta, India. Under ownership of the "Bagree Family", Asbesco has grown from a one-man company to a 150 strong employee organisation.

An ISO 9001 certified company and a specialist in providing components and solutions to the overhead transmission segment of the power industry, the firm has its production plant in Kolkata (previously Calcutta), India and maintains strong marketing and distribution channels in all 28 states in India.

To date the company has ventured into markets in the Far East i.e., Japan, Malaysia, Indonesia; North America and Caribbean Islands i.e., USA, Trinidad and Tobago, Europe i.e., UK, Germany; Africa i.e., Egypt, Ghana, Nigeria, Tanzania; Middle East i.e., UAE, Jordan, etc.

The aim of the company is to become a leader in the domestic power transmission supply industry, increase presence in international markets via exports, facilitate growth through acquisition, improve and increase international productivity and quality.

Customer Requirements

The life of every business lies in its core information assets, such as financial data, customer data, competitive information, tender documents, intellectual property, and more. In order to protect these sensitive information, organizations must implement

Dataresolve's Solution

uHook Enterprise End Point Security

Benefits gained from Dataresolve's Solution

- » **USB Device Control Access Policies specific to each PC and each USB Device**
- » **Extended Visibility and Comprehensive Reporting of all USB activities and File Transfers in the network**
- » **Complete USB security solution that can be monitored by a single IT administrator**

state-of-the-art software technology to maintain full control and audit over transfer of data within and outside of the organization. The sole purpose is to maintain absolute visibility about transfer of digital information and control who will have access to what kind of information depending upon the access clearance level of that employee. These basic data security requirements are no different for Asbesco India Private Limited.

Asbesco has a one-man IT team who is responsible for arranging IT/MIS and administering all the computer activities in the network. Managing data flow through the end-points of all the computers located in different physical levels in the core factory office of Asbesco was a huge challenge.

Not only was the job laborious but also not fool-proof since there were hundreds of ways in which data could travel in the wrong hands or could be taken out of the company easily without notice.

The anxiety of losing sensitive information like tender documents or sensitive customer information was too much for a project-deal based company like Asbesco keeping in mind the scenario that it was competing in an international market.

Solution with deployment of uHook Enterprise

Dataresolve's research analysts thoroughly studied the requirements of Asbesco based on parameters like network size, OS features, organizational structure, employee access level hierarchy and kind of confidential information the company is dealing with. Asbesco needed such a Data Loss Prevention solution which could enable them to control usability of USB drives in their network and monitor the transfer of files from one end-point to another. They needed a complete control and reporting solution with which they could track everyday file transfer activities. The solution also needed to be lightweight and conveniently deployable within a short time. They also needed protection not only for their networked PCs but for some of the highly critical offline machines located at different physical levels of the office.

uHook End Point Security have the flexibility of protecting not only the networked machines, but also offline computers by installing the offline agents of the software package. The solution was deployed in the organization within a span of few days which also included basic training to the IT administrator of company.

The Result

uHook was not only capable of blocking unauthorized portable devices, but also capable of monitoring those devices which are white listed/authorized in the organization to be used by trusted employees, hence, putting an end to the risk and worries of data loss inside the company.

By identifying critical machines in the network, the administrator was able to implement more restrictive and effective user policies.

“uHook Enterprise helped us a lot in solving our problems of data loss. We tried using different kinds of solutions, but none of them were as effective as this product. We are so dependent on this that, we do not allow any new machine to go out in the network until we make sure it has got the label of uHook on it. I would also appreciate the kind of support we received from Dataresolve team “

-Tapas Batabyal, IT Administrator, Asbesco India Private Limited

Asbesco continues to receive a high level of support from Dataresolve. As Asbesco continues to leverage this new solution and plans on extending it to newer offices and implement the next SaaS based solution of the same product from Dataresolve. This is only the beginning of the Asbesco and Dataresolve relationship. Both companies are looking forward to growing this relationship into the future, always keeping the security of Asbesco's office network top of the mind.
